

Laporan Data Quality Assurance
Misi 2 kelompok 16 Sistem Pengawasan Internal

Tabel Quality Assurance

NO	QUALITY METRIC	DESKRIPSI	TARGET	HASIL AKTUAL	STATUS
1	Completeness	Kelengkapan data: memastikan Auditor yang aktif memiliki NIP, Nama, dan Jabatan.	NULL = 0	NULL = 0	PASS
2	Consistency	Memastikan tidak ada data di dalam tabel fakta yang Auditornya tidak dikenal.	0	0	PASS
3	Accuracy	Memastikan skor risiko masuk akal dan potensi kerugian tidak minus.	0 0	9888 0	TIDAK PASS
4	Duplicates	Memastikan tidak ada duplikasi pada Grain (Temuan+Rekomendasi).	0	2	TIDAK PASS
5	Record Counts Reconciliation	Membandingkan jumlah baris antara Staging (Source) dan Fact (Destination).	Selisih 0	selisih	PASS

Analisis

1. Test Completeness (Kelengkapan Data) Tujuan: Kelengkapan data: memastikan Auditor yang aktif memiliki NIP, Nama, dan Jabatan.

```
332  SELECT
333      'Dimensi_Auditor' AS TableName,
334      COUNT(*) AS TotalRows,
335      SUM(CASE WHEN ID_Sistem_Sumber IS NULL THEN 1 ELSE 0 END) AS NullNIP,
336      SUM(CASE WHEN Nama_Auditor IS NULL THEN 1 ELSE 0 END) AS NullName,
337      SUM(CASE WHEN Jabatan IS NULL THEN 1 ELSE 0 END) AS NullJabatan
338  FROM dbo.Dimensi_Auditor
339  WHERE IsCurrent = 1;
340  GO
```

The screenshot shows the SQL Server Management Studio interface with two tabs: 'Results' and 'Messages'. The 'Results' tab contains a table with the following data:

	TableName	TotalRows	NullNIP	NullName	NullJabatan
1	Dimensi_Auditor	510	0	0	0

2. Test Consistency : Memastikan tidak ada data di dalam tabel fakta yang Auditornya tidak dikenal.

```
346  SELECT
347      'Fakta_Temuan_Rekomendasi' AS TableName,
348      COUNT(*) AS OrphanRecords -- Harusnya 0
349  FROM dbo.Fakta_Temuan_Rekomendasi f
350  LEFT JOIN dbo.Dimensi_Auditor a ON f.Auditor_SK = a.Auditor_SK
351  WHERE a.Auditor_SK IS NULL;
352  GO
```

The screenshot shows the SQL Server Management Studio interface with two tabs: 'Results' and 'Messages'. The 'Results' tab contains a table with the following data:

	TableName	OrphanRecords
1	Fakta_Temuan_Rekomendasi	0

3. Test Accuracy : Memastikan skor risiko masuk akal dan potensi kerugian tidak minus.

```
SELECT
    COUNT(*) AS InvalidRiskScores,
    SUM(CASE WHEN Potensi_Kerugian_IDR < 0 THEN 1 ELSE 0 END) AS NegativeLossValues
FROM dbo.Fakta_Temuan_Rekomendasi
WHERE Skor_Risiko_Temuan < 1.00 OR Skor_Risiko_Temuan > 5.00;
GO
```

The screenshot shows the SQL Server Management Studio interface with two tabs: 'Results' and 'Messages'. The 'Results' tab contains a table with the following data:

	InvalidRiskScores	NegativeLossValues
1	9888	0

Banyak data dengan skor risiko tidak masuk akal, namun tidak ada potensi kerugian minus.

4. Test Duplicates : Memastikan tidak ada duplikasi pada Grain (Temuan+Rekomendasi).

```
L
SELECT
    Temuan_SK,
    Rekomendasi_SK,
    COUNT(*) AS DuplicateCount
FROM dbo.Fakta_Temuan_Rekomendasi
GROUP BY Temuan_SK, Rekomendasi_SK
HAVING COUNT(*) > 1;
GO
```

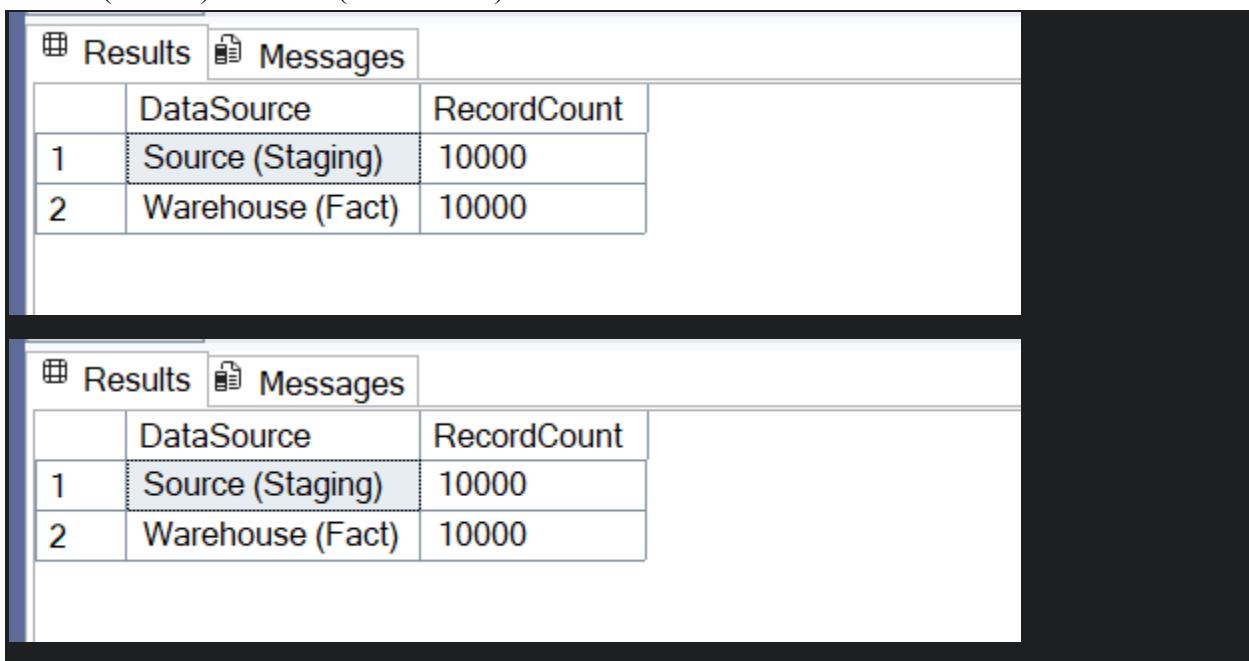

Results Messages

	Temuan_SK	Rekomendasi_SK	DuplicateCount
1	191	96	2
2	371	393	2
3	442	118	2
4	112	121	2
5	352	373	2
6	188	393	2
7	118	357	2
8	115	319	2
9	62	341	2
10	7	83	2
11	269	379	2
12	66	160	2
13	76	209	2
14	34	167	2
15	149	31	3
16	234	125	2
17	498	117	2
18	479	277	2
19	272	142	2
20	59	369	2
21	277	34	2
22	88	227	2
23	223	109	2
24	109	66	2
25	26	235	2
26	25	266	2

Query executed successfully. | IQFIN

Tabel fakta terdapat data duplikasi.

5. Test Record Counts Reconciliation : Membandingkan jumlah baris antara Staging (Source) dan Fact (Destination).

The image shows two vertically stacked SSMS results panes. Both panes have tabs for 'Results' and 'Messages'. The 'Results' tab is selected in both. Each pane contains a table with three columns: 'DataSource', 'RecordCount', and a row index ('1' or '2'). The top pane shows data for 'Source (Staging)' and 'Warehouse (Fact)', both with a RecordCount of 10000. The bottom pane also shows data for 'Source (Staging)' and 'Warehouse (Fact)', both with a RecordCount of 10000.

	DataSource	RecordCount
1	Source (Staging)	10000
2	Warehouse (Fact)	10000

	DataSource	RecordCount
1	Source (Staging)	10000
2	Warehouse (Fact)	10000

Jumlah baris pada staging sama seperti jumlah baris tabel fakta.
